CONFIRMATION of your report of
reception of our Broadcast Signal
at 12:07 EST on Dec 22 1978
Frequency: 1490 kc

Remarks: Good to hear from you. I note you're equidistant from WGCH, WBCB, & WDLC. I guess WBCB really gets out well... WBCB is frequently heard around here on late nite sky-wave. I would guess WGCH would dominate 1490 kc about 20 miles SE of you, near Matawan, where our signal would benefit from a water path. A copy of our coverage map is enclosed, although we do receive interference from WUSS in the Eastern part of our Connecticut "coverage".

Chris Lucas//WGCH

WUSS, U.S.A. 01057
